Azure Storage is a Microsoft-managed service providing cloud storage that is highly available, secure, durable, scalable, and redundant. Azure Storage includes Azure Blobs (objects), Azure Data Lake Storage Gen2, Azure Files, Azure Queues, and Azure Tables. The cost of your storage account depends on the usage and the options you choose below.
[Learn more about Azure storage accounts](#)

Project details

Select the subscription in which to create the new storage account. Choose a new or existing resource group to organize and manage your storage account together with other resources.

Subscription *

subscr-ita-vkoldov

Resource group *

PL_24_Databricks

[Create new](#)

Instance details

Storage account name *

staccountblech

Region *

(US) East US

[Deploy to an Azure Extended Zone](#)

Preferred storage type

Azure Blob Storage or Azure Data Lake Storage

This helps us provide relevant guidance. It doesn't restrict your storage to this resource type. [Learn more](#)

Performance *

☒ Standard: Recommended for most scenarios (general-purpose v2 account)

☐ Premium: Recommended for scenarios that require low latency.

Redundancy *

Locally redundant storage (LRS)

Hierarchical Namespace

Hierarchical namespace, complemented by Data Lake Storage Gen2 endpoint, enables file and directory semantics, accelerates big data analytics workloads, and enables access control lists (ACLs) [Learn more](#)

Enable hierarchical namespace

☒

Access protocols

Blob and Data Lake Gen2 endpoints are provisioned by default [Learn more](#)

Enable SFTP

☐

Enable network file system v3

☐

Blob storage

Allow cross-tenant replication

☐

Cross-tenant replication and hierarchical namespace cannot be enabled simultaneously.

Access tier

☒ Hot

Optimized for frequently accessed data and everyday usage scenarios

☐ Cool

Optimized for infrequently accessed data and backup scenarios

☐ Cold

Optimized for rarely accessed data and backup scenarios

Azure Files

Enable Managed Identity for SMB

☐

Require Encryption in Transit for SMB

☒

Public access

Access your resource from anywhere through a public network.

Note: Allowing access to your resource through a public network increases security risk. [Learn more](#)

Public network access

☒ Enable

Allow inbound and outbound access with the option to restrict select inbound access using resource access configurations for this resource.

☐ Disable

Restrict inbound access while allowing outbound access.

☐ Secure by perimeter (Most restricted)

Restrict inbound and outbound access using a network security perimeter. Secure by perimeter offers the greatest level of inbound and outbound restriction to secure your resource.

Public network access scope

☐ Enable from all networks

☒ Enable from selected virtual networks and IP addresses

Virtual networks

Only the selected network will be able to access this storage account. [Learn more](#)

2 Key Vault

The screenshot shows the 'Create a key vault' wizard in the Microsoft Azure portal, specifically the 'Review + create' step. The interface includes a blue header with the 'Microsoft Azure' logo and a search bar. Below the header, the 'Home' link is visible. The main heading is 'Create a key vault' with a three-dot menu icon. A navigation bar contains tabs for 'Basics', 'Access configuration', 'Networking', 'Tags', and 'Review + create', with the last tab being the active one. The 'Review + create' section displays the configuration details for the key vault, organized into three categories: Basics, Access configuration, and Networking. At the bottom of the wizard, there are three buttons: 'Previous', 'Next', and 'Create'. The 'Create' button is highlighted in blue. Below the wizard, a Windows taskbar is visible, showing the date and time as 21°C and 'Cz. słonecznie'.
